Topic 9 | Assessment Evidence

Testing, Debugging, and Optimizing API Integrations

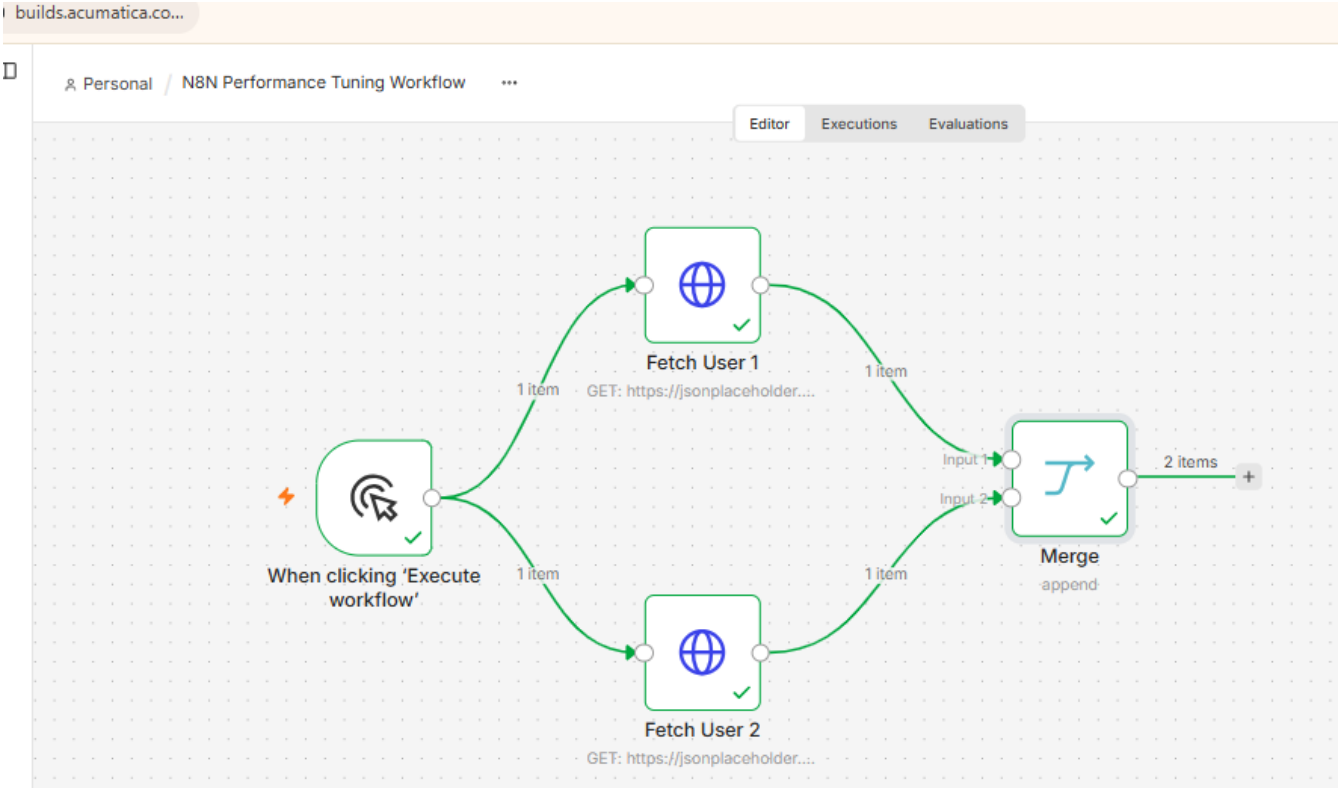

Project: N8N Performance Tuning Workflow | 30 October 2026

Verified: successful HTTP GET requests, Merge with two output items, Postman HTTP 200 response, and an n8n execution-history run lasting 216 ms. Automated Postman test pass counts and sequential baseline are not yet evidenced.

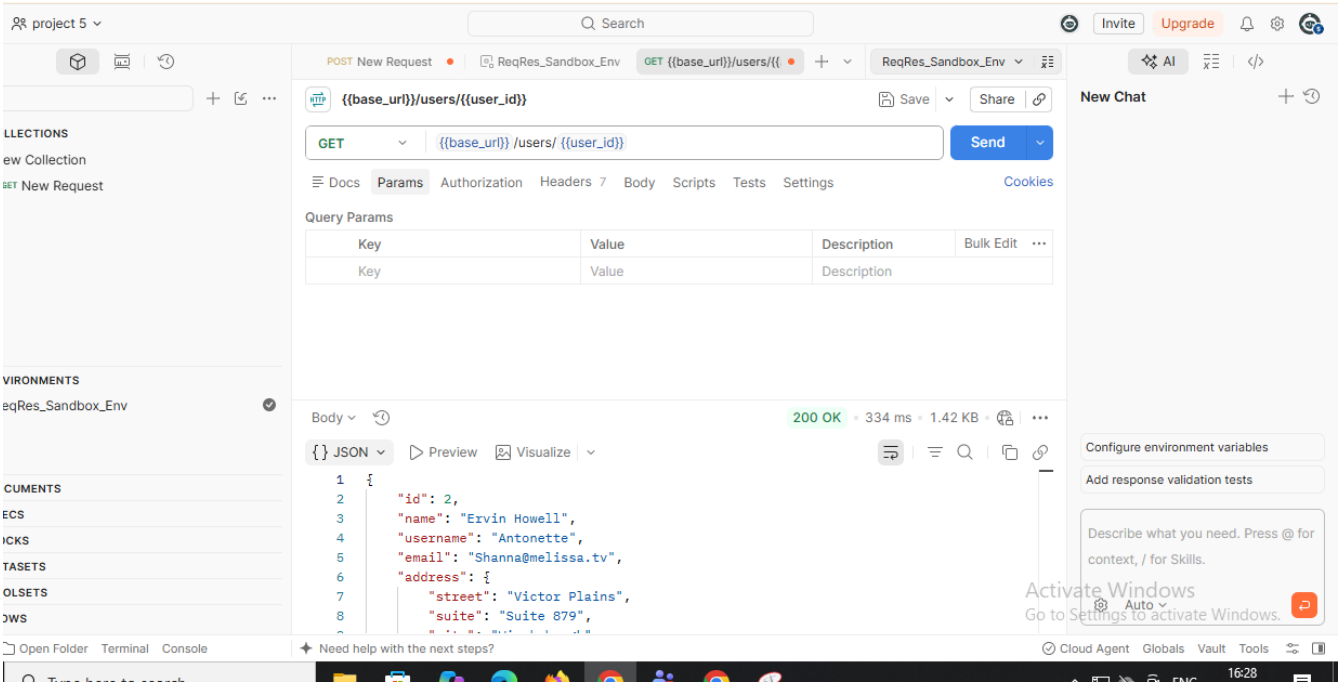

Evidence	Observed result
Fetch User 1	GET /users/1; user ID 1; success
Fetch User 2	GET /users/2; user ID 2; success
Merge	Append; 2 inputs; 2 output items
Postman	HTTP 200; 342 ms; user ID 2
n8n execution	ID 549746; succeeded; 216 ms; 5 KB
Assertions	Scripts entered; 3/3 pass results not shown

Captured screenshots

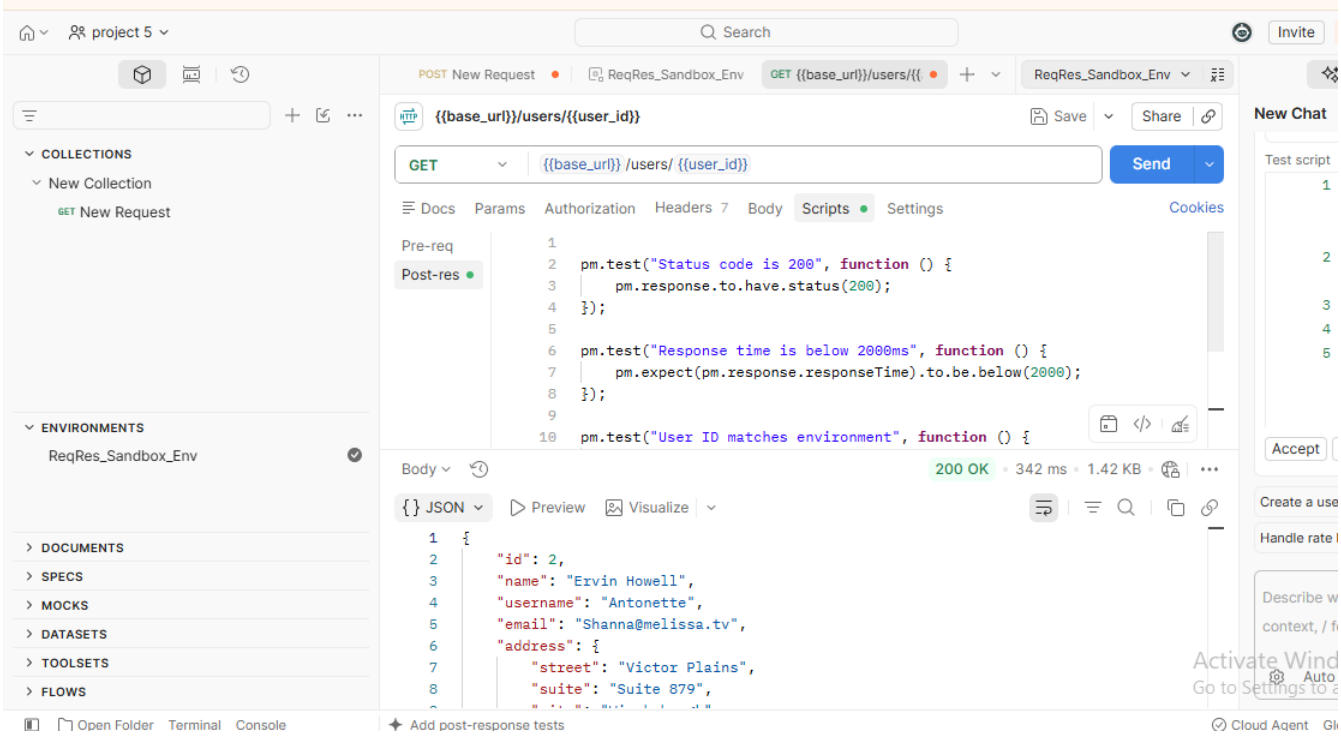

Complete branched workflow with successful nodes and Merge output.

Postman GET request returned 200 OK and user ID 2.

Postman Post-response assertion script and successful HTTP response.

n8n Executions tab: succeeded in 216 ms, execution ID 549746, 5 KB.
